### ***Specification***

The examiner has not checked the specification to the extent necessary to determine the presence of **all** possible minor errors (grammatical, typographical and idiomatic). Cooperation of the applicant(s) is requested in correcting any errors of which applicant(s) may become aware of in the specification, in the claims and in any future amendment(s) that applicant(s) may file.

Applicant(s) is also requested to complete the status of any copending applications referred to in the specification by their Attorney Docket Number or Application Serial Number, **if any**.

The status of the parent application(s) and/or any other application(s) cross-referenced to this application, **if any**, should be updated in a timely manner.

### ***Claim Objections***

Claim 16 should apparently recite a composition prepared according to "the method of claim 6".

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 3,411,888 to Drost et al. for substantially the same reasons set forth on page 4 of the previous office action. The examiner notes applicant's comments that this reference should have been characterized as Westerland et al. However, the examiner characterized the reference as Drost et al. to be consistent with applicant's PTO-1449 filed April 22, 2009.

Drost et al. differ from the claimed invention in the failure to recite the specific amounts of zeolites. But the skilled artisan would have been capable of arriving at such

amounts within the broad disclosure of Drost et al. because they would result-effective for the adsorbent process for which the composition will be employed.

With respect to the method of use claims, as stated in the previous office action, Drost et al. teach using the composition to adsorb water from a mixture. Accordingly, the skilled artisan would expect the composition to have utility in the separation processes set forth in the instant application.

With respect to requiring the composition to contain zeolite 3A, it is pointed out that both chabazite and zeolite 3A are notoriously well known as water-adsorbing materials and the substitution of one for the other would therefore have been within the skill of the artisan practicing in this filed, with the expectation of success. See, for example, US 4,663,052 or US 5,120,694.

### ***Response to Arguments***

Applicant's arguments filed August 28, 2009 have been fully considered but they are not persuasive.

Applicant argues that the Drost reference does not suggest a mixture of natural zeolites. This is not convincing as the reference specifically recites a material obtained from an ore containing both chabazite and clinoptilolite.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
